

Tex Texin is an industry thought leader and consultant specializing in software globalization services. Tex, and his consulting company XenCraft, has helped numerous companies create successful global products and guided companies in taking business to new regional markets.

Tex has contributed to several internationalization standards and open source software.

He is also currently a technology advisor to Translation Commons where he is architecting their Language Digitization Initiative, bringing the languages of Indigenous communities to digital systems. Most recently, Tex has been developing keyboards and related standards for Indigenous languages.

Tex is a popular speaker at conferences around the world. Tex is the owner/author of the popular, instructional I18nGuy.com site.

I think I can touch on some history of technologies to help people understand how AI will trend in the future and affect the translation industry and how individuals might protect their careers.

Within that, I think I can also suggest some ideas for copyright protection and the like, and also hope to bring in some examples from indigenous communities.

I am a little concerned about making it fit into 10 minutes, but I can probably get it there.

Anyway, that are some still rough ideas.

My working title is “**Surfing the AI Tsunami**”
